Dear Hiring Committee,

I am writing to apply for the Research Intern role in Neuroscience, Learning and AI in Higher Education at UNU Macau (remote, October to December 2026).

I hold a Bachelor of Science in Applied Computing from KCA University (2023). My coursework included Artificial Intelligence, system analysis, and data protection. I do not yet hold a Master's degree. I am applying because my work sits at the practical edge of AI and adult learning: I help working professionals learn and use digital systems well, and I want to deepen that into policy-oriented research under UNU Macau's supervision.

For about three years at PATH I have supported health information systems and IT operations across multiple sites. A large part of that work is teaching. I have trained more than 80 staff across 15+ sessions on EMR modules, DHIS2, data quality, and secure system use. I write SOPs and job aids so people can learn step by step, not by trial and error. I have also supported data tools for nurturing care / early childhood development work, which sharpened my interest in how learning happens outside formal classrooms.

Day to day I use AI tools for documentation, troubleshooting, and knowledge drafting. That experience raised a question I want to study more carefully: how AI can support adult learning without replacing judgment, especially in high-stakes settings such as health and higher education. I can contribute to literature reviews, research briefs, and clear English drafts for the Springer book and related policy outputs. I work well independently in a remote setting and I am careful with sources and wording.

I have attached my CV and an English research writing sample on AI-supported adult learning in digital systems training. I would be grateful for the chance to contribute to UNU Macau's work on AI and higher education.

Yours faithfully,

Meshack Ariri
