Dear Hiring Team,

Re: IT Lead/Manager, CURE International, Kijabe

I am applying for the IT Lead/Manager role at CURE Kenya. For more than three years at PATH I have run ICT for a health organisation: the network, the servers, the endpoints, the EMR, the backups and the people. Availability stayed near 98%. I am CCNA certified, with a BSc in Applied Computing specialised in cybersecurity and digital forensics.

Your duty list is the work. I deploy LAN, WAN, network segments, Internet and remote access. I install and rebuild servers, and I configure desktops, laptops, Chromebooks, tablets, printers, routers, switches, firewalls, phones, smartphones and software. I keep deployment and configuration documentation. I create, update, disable and delete accounts. I monitor hardware, logs and scheduled backup jobs every day, including local, network-attached and offsite cloud copies. When something fails I recover it and I tell the users. I patch. I train the hospital. I coach junior ICT the way an IT Officer would report in. I manage vendors, resources and budget inputs. I will follow CURE International Technology standards, including security, privacy and acceptable AI use.

CURE is a children's surgical hospital. I have already kept clinical systems reachable while a clinician was waiting. I will follow CURE International Technology standards, including security, privacy and acceptable use of approved AI tools. I am available as soon as possible for Kijabe.

Sincerely,
Meshack Ariri
