Dear Hiring Team,

Re: Network Engineer, Reference NE/IID/2026

I am applying for the Network Engineer role, reference NE/IID/2026. For more than three years at PATH I have run the corporate network across multiple sites: performance against SLA, monitoring and proactive support, firewall and access policy, patch and signature updates, disaster recovery, and a complete inventory of the network. Availability has held near 98%. I am CCNA certified, with a BSc in Applied Computing from KCA University, specialised in cybersecurity and digital forensics.

Your job description is the work I already do. I keep LAN and WAN performing so the business systems on them stay up. I watch logs, events and device health and act before users raise a ticket. I write and enforce device access, security, backup and continuity policy. I install and maintain Cisco and Cisco Meraki switches, access points and MX appliances, routers, FortiGate firewalls and IP telephony, and I take the outage when a device fails. I document the architecture and I own the asset list.

I hold CCNA. CCNP is something I am willing to learn. What I bring now is three years of live multi-site network ownership, TCP/IP, firewalls, IP telephony, and the security instinct that comes from a forensics degree and from keeping systems reachable when people are waiting on them. Give me your topology and I will run it.

I am available as soon as possible.

Sincerely,
Meshack Ariri
