Dear Hiring Manager,

Re: Network Administrator, Gertrude's Children's Hospital

I am applying for the Network Administrator position at Gertrude's Children's Hospital. I am CCNA certified, which meets your certification requirement, and I hold a BSc in Applied Computing from KCA University with a specialisation in cybersecurity and digital forensics. For about three years at PATH, a global health organisation, I have run multi-site network operations for 120+ users and held clinical and enterprise systems at roughly 98% availability.

The work you describe is the work I do. I configure and monitor Cisco Meraki access points, switches and security appliances across sites; I manage inter-site links, VLAN segmentation, VPN, DNS and DHCP, addressing, staff and guest wireless, and IP telephony; and I keep connectivity to cloud and partner-hosted systems working. On security I implement the controls rather than debate them: firewall policy, segmentation, MFA and least-privilege identity, endpoint protection and patch management, with alerts answered and incidents documented. I keep the network documented, handle ISPs and vendors, and report availability to leadership.

What I would bring that a network administrator from outside healthcare cannot is the instinct that comes from clinical stakes. I have supported facilities where an EMR that cannot reach its server means a clinician waiting with a patient in front of them, so I plan for resilience, watch capacity before it becomes an outage, and treat availability as a care-delivery obligation. Working with 15 facilities, a Cyber Security team and clinical departments is the environment I already operate in, including onboarding and segmenting new devices safely as clinical and IoT technology arrives.

I am based in Nairobi and available immediately. I would welcome the chance to discuss how I can keep Gertrude's network resilient, documented and ready to scale.

Sincerely,
Meshack Ariri
