3+ yrs	Python	GitLab	24x7
TECHNICAL / L2	LOGS AND SCRIPTS	KUBERNETES	KENYA WFH

PROFILE

L2 Technical Support Engineer, about three years at PATH: the person who takes the ticket when guided steps fail. I read logs, write and run Python to isolate backend failures, apply controlled changes in GitLab and Kubernetes (restart, MR merge, storage and capacity inside the guideline), and I stop before a non-reversible live-database action. I escalate to Engineering, QA, Infrastructure, and Product with reproduction notes. Grafana, Freshdesk, Incident/Change/Problem. High-compliance health systems. Kenya, WFH, 24x7 staggered 5-day roster.

L2 / product support Deep-dive troubleshooting, pre-approved fixes, client expectation management, evidence-ready escalation to Engineering/QA/Infra/Product
Log and code Complex system logs, Python (read, write, execute), operational scripting, backend failure isolation, RCA and workarounds
Platform operations GitLab and GitHub (MR, review, merge), Kubernetes (controlled config, restart, storage, capacity), reversible vs non-reversible database actions
Cloud / systems Cloud infrastructure (Azure/AZ-900), networking, system architecture, log analysis, Grafana
ITSM / change Incident, Change, and Problem Management; Freshdesk, Zoho Desk, Jira; KB, SOPs, monitoring hygiene
Compliance / roster Controlled high-compliance environments (health systems), access and change discipline; 24x7 staggered 5-day; English

EXPERIENCE

Technical Support Engineer (L2)
Mar 2025 to Present
PATH · Kenya (Hybrid / Remote)

- Own L2 deep-dives on production health systems: read logs, run Python, isolate backend failures, restore service, write the RCA. Uptime above 98%.
- Apply only pre-approved change in GitLab/GitHub and Kubernetes: restarts, MR merges, storage and capacity. Stop before a non-reversible database action and escalate with evidence.
- Hand Engineering, QA, and Infrastructure a confirmed defect (reproduction, logs, what is safe to run). Grafana for the live picture. Plain English to the client, then the KB article.

Technical Support Agent (L2)
Jan 2024 to Mar 2025
PATH · Kenya (multi-site)

- L2 queue for 120+ users: Freshdesk and Zoho Desk under Incident, Change, and Problem-style ITIL. About 25% faster response once L1 had a real escalation path.
- Closed cases guided steps could not: identity, endpoint, network, application logs. Python and SQL to kill repeat failures. Change discipline on live data. Trained 80+ users.

Platform operations (GitLab, Kubernetes, Python)
2023 to Present
Independent · Remote (project-based)

- Operate GitLab/GitHub and Kubernetes-shaped environments: MRs, config, restarts, capacity. 40+ REST APIs, Python automation, MySQL, Grafana-style dashboards. Reversible actions in the runbook; irreversible SQL does not run.

EDUCATION **BSc, Applied Computing · KCA University, Nairobi · November 2023**
Cybersecurity and Digital Forensics. Coursework: Ethical Hacking, Digital Forensics, Data Protection, Cloud Computing.
