Dear Influx hiring team,

I am applying for the Technical Support Agent (L2) role, Kenya, work from home. I am the L2: when the runbook ends, I read the logs, write and run Python, apply the controlled change in GitLab and Kubernetes, and I do not touch a live database action that cannot be reversed. I escalate to Engineering, QA, Infrastructure, and Product with reproduction and evidence. I explain the same incident to the client in plain English.

About three years at PATH in a controlled high-compliance health-systems environment: access, change management, operational procedure. Grafana in production. Freshdesk under Incident, Change, and Problem workflows. Ticket response about 25% faster once the queue had a real L2 path. I hold a BSc in Applied Computing, GitHub Professional, and Azure Fundamentals (AZ-900).

I am based in Kenya. I can work the 44-hour, 24x7 staggered 5-day roster including nights, weekends, and holidays. I will take your English assessment. Contact me only from an @influx.com address. I will not pay any fee.

Thank you.

Sincerely,
Meshack Ariri
