USERS SUPPORTED	UPTIME HELD	FASTER TICKETS	STAFF TRAINED

PROFILE

Technical support specialist with three years at PATH, a BSc in Applied Computing, and a specialisation in cybersecurity and digital forensics. I own first and second line for more than 120 users, keep clinical systems above 98 percent uptime, and cut a monthly reporting grind by about 40 percent with SQL and Python. I work Freshdesk and Zoho Desk under ITIL and SLA. I isolate whether a fault is the account, the device, the network, or the application, then I write a note the next person can use.

Service desk First and second line, Freshdesk, Zoho Desk, Jira Service Management, ITIL, SLA, knowledge base, 20+ tickets a day
Product diagnostics Reproduce the fault, read logs and REST payloads, SQL checks, Grafana, clean handoff to Engineering
Identity and endpoints Active Directory, Microsoft 365, Windows 10 and 11, MFA, imaging, printers, VoIP and 3CX, Salesforce tickets
Networking LAN, WAN, VPN, DNS, DHCP, Cisco Meraki, MikroTik, Wi-Fi. CCNA.
Security Cybersecurity and digital forensics specialisation. Awareness training, access control, vulnerability reporting. Hackathons with CA Kenya and Huawei. Cyber Shujaa programme.

EXPERIENCE

Health Informatics / HMIS Officer

Mar 2025 to Present

PATH · Kisumu and Nyamira, Kenya (hybrid)

- Owned the tickets that leave the article: KenyaEMR, DHIS2, accounts, devices, and the joins between laboratory, pharmacy, and reporting. Services stayed above 98 percent uptime.
- Reproduced faults before escalating. Read the logs, the SQL, and the API payload, then named whether the break was identity, endpoint, network, or the application. Engineering got a defect, not a feeling.
- Built SQL and Python checks that cut a monthly reporting job by about 40 percent, the same habit I use to stop the same support ticket coming back every week.
- Trained more than 80 staff and wrote the SOP so a fix does not live only in my head.

ICT Associate

Jan 2024 to Mar 2025

PATH · Kisumu, Kenya

- Ran first and second line for more than 120 users across sites, often more than 20 tickets a day. Uptime stayed around 98 percent. Response time improved about 25 percent once the queue had a real path.
- Closed login, MFA, Microsoft 365, Windows, printer, VoIP, and Salesforce access tickets in Freshdesk and Zoho Desk. Administered Active Directory with least privilege. Diagnosed LAN, WAN, VPN, DNS, and DHCP on Cisco Meraki.
- Turned repeat fixes into knowledge-base articles. Supported OVC and DREAMS in the field as the ICT person. Ran digital and manual MIS for PATH ECD until that workstream closed in 2025.

Remote IT support and platform operations

2023 to Present

Independent · Remote (project-based, alongside PATH)

- Supported small teams on Microsoft 365, Google Workspace, and onboarding, remotely, with the same ticket discipline I use at PATH.
- Built an operations platform used to prove a product defect: Next.js, TypeScript, MySQL, more than 40 REST APIs, an incident module, and Grafana-style dashboards.

EDUCATION

BSc, Applied Computing · KCA University, Nairobi · November 2023
Cybersecurity and Digital Forensics. Coursework: Ethical Hacking, Digital Forensics, Data Protection, Cloud Computing.
