Dear Hiring Team,

I am applying for the Technical Support role.

For three years at PATH I have owned first and second line for more than 120 users. Uptime has stayed around 98 percent. Ticket response improved about 25 percent. I take the cases the first article cannot finish, keep KenyaEMR and DHIS2 working, and cut a monthly reporting grind by about 40 percent with SQL and Python. I isolate whether the break is the account, the device, the network, or the application, then I write a note Engineering can use.

I hold a BSc in Applied Computing from KCA University with a specialisation in cybersecurity and digital forensics. I have competed in the Cyberise Hackathon run by the Communications Authority of Kenya with Huawei, in Cyber Rise with Huawei, in the National Research Fund Cybersecurity Challenge, and I completed the Cyber Shujaa programme. That is how I think about a ticket that has a security edge, not only a password reset.

Independently I also built an operations platform with more than 40 APIs, which is why I can step into a product instead of guessing from the subject line. I am based in Kisumu, Kenya, and I am ready to work remote. Google IT Support, IBM Technical Support, Azure Fundamentals, and CCNA are on the CV.

Thank you.

Sincerely,
Meshack Ariri
