

## EDUCATION

### KCA University

**Nairobi, KE**

- Bachelor of Science in Applied Computing November 2023
- Related Coursework: Artificial Intelligence, Cloud Computing, System Analysis and Design, Ethical Hacking, Criminology, Data Protection
- Capstone Project – Designed and implemented a secure enterprise-style network simulating real-world IT operations, including structured user management, system segmentation (VLANs), centralized identity control (Active Directory), and backup and disaster recovery planning to support operational continuity and system reliability.

## EXPERIENCE

### Program Appropriate for Technology in Health (PATH)

**Hybrid, KE**

*Technical Support Specialist (HMIS)*

*March 2025- Present*

- Supported healthcare system operations across EMR platforms (KenyaEMR, TaifaCare, DHIS2), ensuring reliable service delivery and operational continuity
- Coordinated issue resolution workflows across multiple systems, ensuring timely response, tracking, and escalation of operational issues
- Conducted cybersecurity monitoring, vulnerability assessments, and system audits across healthcare infrastructure environments
- Maintained structured reporting on system performance, incident trends, and operational health metrics to support decision-making
- Managed access control, IT asset tracking, and system security processes to ensure accountability and operational integrity
- Collaborated with cross-functional teams to support integration of clinical systems and improve workflow efficiency across departments

### Program Appropriate for Technology in Health (PATH)

**Hybrid, KE**

*ICT Associate*

*Jan 2024- March 2025*

- Provided technical support to 120+ users, ensuring consistent system availability and structured resolution of operational issues
- Logged, tracked, and managed incidents using Freshdesk, maintaining workflow discipline, documentation accuracy, and SLA compliance
- Supported configuration and management of Cisco Meraki network infrastructure to ensure secure and reliable connectivity across users
- Administered Active Directory for user provisioning, access control, and system permissions aligned with structured operational processes
- Monitored endpoint security systems and responded to system alerts to maintain operational stability and risk mitigation
- Produced regular reports on system performance, incidents, and IT operations to support transparency and accountability
- Delivered user training and support on secure system usage, communication tools, and operational best practices

## SKILLS

- Structured Communication in Technical Environments
- Workflow Coordination & Process Management
- Stakeholder Communication & Support
- System Analysis & Design (Operations Workflow Thinking)
- Information Systems Fundamentals
- IT Service Management (ITIL Concepts)
- Business Process Understanding
- Data Protection & Information Security Principles
- Cybersecurity Awareness & Risk Management
