

EDUCATION

KCA University

Nairobi, KE

November 2023

- Bachelor of Science in Applied Computing
- Related Coursework: Artificial Intelligence, Cloud Computing, System Analysis and Design, Ethical Hacking, Criminology, Data Protection
- Capstone Project – Designed and implemented a secure office network with VLANs, Active Directory, and backup systems, with a focus on system availability, access reliability, and operational monitoring. The project included simulated user access flows, service continuity testing, system health checks, and basic incident troubleshooting scenarios to reflect real-world IT operations and system reliability management.

EXPERIENCE

Program Appropriate for Technology in Health (PATH)

KE

HMIS

March 2025- Present

- Supported continuous monitoring of digital platforms including KenyaEMR/TaifaCare and DHIS2 by tracking system alerts, validating reported issues, and ensuring uptime of critical services used by end users.
- Performed structured verification of system alerts and user-reported incidents by checking system behavior, confirming faults, and distinguishing real issues from false or duplicate alerts before escalation.
- Conducted routine operational checks on application servers and databases to ensure platform stability, service continuity, and performance of web-based health systems.
- Investigated and documented system issues affecting users, including access failures, page errors, workflow interruptions, and application inconsistencies, then escalated unresolved cases to technical teams.
- Generated operational reports summarizing system availability, incident trends, and recurring platform issues to support service monitoring and improvement decisions.
- Supported integration and maintenance of web-based systems across EMR, laboratory, and pharmacy platforms while ensuring data flow consistency and system reliability.
- Provided user support for system access, navigation issues, and workflow-related problems within web-based applications, ensuring timely resolution and follow-up.
- Maintained structured documentation of system issues, fixes, and escalations to support operational tracking and continuity.

Program Appropriate for Technology in Health in Health (PATH)

KE

ICT Associate

Jan 2024- March 2025

- Supported day-to-day operations of ICT systems by assisting with user issue logging, troubleshooting of connectivity problems, and resolution of access-related issues.
- Assisted in monitoring system infrastructure including servers, routers, switches, and devices that supported internal digital services.
- Created and updated tickets in Freshdesk while tracking issue resolution progress and assisting in workflow coordination.
- Assisted in identifying system faults through basic diagnostics, server room checks, and performance monitoring activities.
- Supported deployment and maintenance of user systems, including software installation, configuration, and device setup for operational use.
- Contributed to documentation of system issues, operational processes, and internal IT procedures for continuity and reporting.
- Supported senior engineers in tasks involving network configuration, system segmentation, and server provisioning for internal platforms.

Independent Digital Systems Consultant (Project-Based)

Remote, KE

HMIS

Jan 2023- Present

- Supported design and simulation of digital systems including monitoring environments, server-based applications, and web-based workflows used for operational testing and learning.
- Performed structured system monitoring practices including issue detection, alert interpretation, and validation of system behavior in controlled environments.
- Simulated ticketing and workflow management processes including issue logging, tracking, escalation flow, and resolution documentation aligned to IT support operations.
- Conducted system reliability checks on web-based applications and backend services, identifying errors, access issues, and workflow disruptions for analysis and correction.
- Developed and supported project-based platforms including EMR testing environments and mobile application projects such as JuaX, focusing on system stability and functional validation.
- Practiced operational reporting by documenting system issues, tracking resolution progress, and analyzing recurring technical patterns for improvement.
- Strengthened troubleshooting and escalation workflows by replicating real-world IT support and digital operations scenarios.

SKILLS AND ACTIVITIES

- Digital Systems Monitoring including system alert validation, issue verification, uptime monitoring, service disruption identification, and web-based system stability checks.
- Website and Application Operations Support including error detection, system behavior validation, workflow interruption identification, and escalation of confirmed incidents.
- Ticketing and Workflow Management including Freshdesk, queue tracking, incident prioritization, SLA monitoring, and structured follow-up communication.
- System Administration including Windows Server 2016/2019/2022, Active Directory, Group Policy, and Linux environments.
- Networking including LAN/WAN support, VPNs, VLANs, firewall configuration, troubleshooting, and connectivity monitoring.
- Collaboration Tools including Microsoft Teams, Outlook, SharePoint, and Office 365 suite.
- Monitoring and Reporting including system health checks, uptime tracking, incident documentation, and operational reporting.
- Cloud and DevOps including Microsoft Azure, Git/GitHub workflows, and cloud environments.
- Automation and Scripting using PowerShell, Bash, and Python.
- Virtualization and Backup including VMware, Hyper-V, Veeam, rsync, and disaster recovery systems.
- Asset and Inventory Management including IT lifecycle tracking and reporting.

ACHIEVEMENTS

- Cyber Rise Hackathon (Huawei, 2023): Participated in a cybersecurity incident response simulation involving real-time system monitoring, issue detection, and troubleshooting under time constraints.
- National Research Fund Cybersecurity Challenge (Government of Kenya, 2024): Participated in structured simulation exercises focused on identifying system failures, validating incidents, and coordinating resolution workflows similar to operational monitoring environments.
- Blockchain Security Hackathon (CP Hub, 2024): Analyzed system vulnerabilities in application environments, identifying potential faults and contributing to secure system design improvements.
- Campus Innovation Weeks and Hackathons (KCA University, 2022–2023): Built and tested system-based projects involving debugging, troubleshooting, system reliability checks, and application performance validation under simulated operational conditions.
